APPLIED TECHNOLOGY COUNCIL

The Applied Technology Council (ATC) is a non-profit, tax-exempt corporation established in 1971 through the efforts of the Structural Engineers Association of California. The purpose of ATC is to assist the design practitioner in structural engineering (and related design speciality fields such as soils, wind, and earthquake) in the task of keeping abreast of and effectively utilizing technological developments. To this end, ATC also identifies and encourages needed research and develops consensus opinions on structural engineering issues in a non-proprietary format. ATC thereby fulfills a unique role in funded information transfer.

The Applied Technology Council is guided by a twelve-member Board of Directors. The

Board consists of representatives appointed by the American Society of Civil Engineers, the Structural Engineers Association of California, the Western States Council of Structural Engineers Associations, and two at-large representatives concerned with the practice of structural engineering. Each director serves a three-year term. Project management and administration are carried out by a full-time Executive Director and support staff. ATC calls upon a wide range of highly qualified professionals as consultants on specific projects, thus incorporating the experience of many individuals from academia, research and professional practice who would not be available from any single organization.

1987-88 Board of Directors

Philip J. Richter, President

Lawrence D. Reaveley, Vice President

Sigmund A. Freeman, Secretary-Treasurer

Robert K. Burkett

Barry J. Goodno
